work of art

SlimLine® digital electronic

thermostats for residential and

commercial applications

enerstat.

Energy efficiency never looked better!™

New DSL SlimLine® Communicating digital

Introducing SlimLine® Communications by enerstat®.....a new generation of electronic, non-programmable, digital thermostats that combine climate control, comfort, dependability and communications abilities. Building on the reputation for accurate, efficient temperature control, enerstat® now offers communications in the same ultra-slim case currently produced for the SlimLine® digital thermostats used in residential and commercial applications. Enerstat® expanded communications abilities combine RS485 communications protocol with the NC, IC version and standard communications with the SC version.

SlimLine® models are available in four custom configurations to satisfy heating, cooling, heatpump and multi-stage equipment applications.

STANDARD FEATURES

- Designed for today's interiors
- Environment friendly - mercury-free, does not require batteries
- Electronic keypad and/or lockable cover prevents tampering
- Built-in equipment protection under normal operating conditions
- Day/Night button provides alternate temperature settings
- Optional remote indoor temperature sensor
- Optional outdoor temperature sensor
- Selectable Celsius or Fahrenheit temperature display

All enerstat SlimLine® Communicating Thermostats are backed by a Limited One-Year Warranty

DSL SlimLine® Residential & Commercial digital

Introducing SlimLine® by enerstat®... a new generation of electronic thermostats that combine unsurpassed temperature control technology creatively packaged in an ultra-slim case designed to blend harmoniously with any interior. Using the most advanced state-of-the-art surface mount manufacturing techniques, SlimLine® thermostats offer user-friendly control of heating and air conditioning systems through the use of a unique Ultra-Touch keypad and informative, easy-to-read Liquid Crystal Display.

Actual
Size

SlimLine® models are available in eight custom configurations to satisfy heating, cooling, heatpump and multi-stage equipment applications.

STANDARD FEATURES

- Designed for today's interiors
- Environment friendly - mercury-free, does not require batteries
- Electronic keypad and/or lockable cover prevents tampering
- Built-in equipment protection under normal operating conditions
- Day/Night button provides alternate temperature settings
- Optional remote indoor temperature sensor
- Optional outdoor temperature sensor
- Selectable Celsius or Fahrenheit temperature display

All enerstat SlimLine® Thermostats are backed by a Limited Two-Year Warranty

COMMERCIAL *programmable*

Tired of trying to maintain a comfortable work environment and cut energy costs at the same time? SlimLine® Commercial Programmable Thermostats provide the answer through enhanced temperature control and energy savings. Program up to seven individual daily schedules with user-friendly Ultra-Touch keypad and informative Liquid Crystal Display features. Designed for new or replacement applications, SlimLine® Programmable Commercial Thermostats combine state-of-the-art technology with an ultra-slim case that is creatively packaged to compliment today's stylish commercial interiors.

SlimLine® Commercial Programmable models are available in a variety of configurations to satisfy your specific heating and cooling requirements.

STANDARD FEATURES

- Selectable 2 or 4 events per day programming
- Environment friendly - mercury-free, does not require batteries
- Maintains all settings and operation modes after any power outage
- Clock does not require resetting for outages up to 30 minutes
- Smart Fan feature for continuous fan during occupied periods
- Electronic keypad and/or lockable cover prevents tampering
- Automatic or manual fan selection
- 12-hour or 24-hour clock display
- 7 day programming
- Copy feature for fast programming
- Instant override of scheduled program either continuous or temporary
- Optional remote indoor temperature sensor
- Optional outdoor temperature sensor
- Independent circuit switching (dry contact - AC/DC)
- Selectable Celsius or Fahrenheit temperature display

stat

RESIDENTIAL *programmable*

Enerstat SlimLine® Programmable thermostats have all the superb features and attractive styling of SlimLine® Digitals, with the added bonus of energy savings through heating and cooling schedule programming. Program up to four heating and cooling week-day events plus four schedules for the weekend. Instant override of scheduled program either continuous or temporary. Designed for new or replacement applications, SlimLine® models can fit your specific heating or cooling equipment requirements.

SlimLine® Residential Programmable models are available to suit your heating and cooling requirements.

STANDARD FEATURES

- Programmable for energy savings
- 5 and 2 day programming
- Environment friendly - mercury-free, does not require batteries
- Maintains all settings and operation modes after any power outage
- Clock does not require re-setting for outages up to 30 minutes
- Electronic keypad and/or lockable cover prevents tampering
- Automatic or manual fan selection
- 12-hour or 24-hour clock display
- Daylight Savings Time clock-change feature
- Easy to read, informative Liquid Crystal Display
- Optional remote indoor temperature sensor
- Optional outdoor temperature sensor
- Selectable Celsius or Fahrenheit temperature display

New DSL SlimLine[®] Communicating digital

The SC (Standard Communications) series has the same functionality of the regular family of thermostats (DSL-300/450/600/700) but with the addition of communications using the standard **enerstat**[®] hardware interface (open-collector logic driving the communications line) and a data rate of 1,200 bits/sec (asynchronous).

The communications line allows for remote (computer controlled) access to all the functions normally accessible through the thermostat's keypad and display. Some extra functions have been included in the communications package for advanced applications as for example: displaying time from a central clock, changing the setpoint ranges, etc.

The NC (Non-isolated Communications) series is functionally identical to the SC series except that the hardware interface complies with the RS485 standard and the data rate is 9,600 bits/sec (asynchronous). It provides **No** isolation between the ground of the thermostat's power supply transformer and the ground terminal at the RS485 port.

The IC (Isolated Communications) series is identical to the NC family except for the complete isolation between power supply and communications ground terminals.

Putting the Power of Technology into Your Home or Business

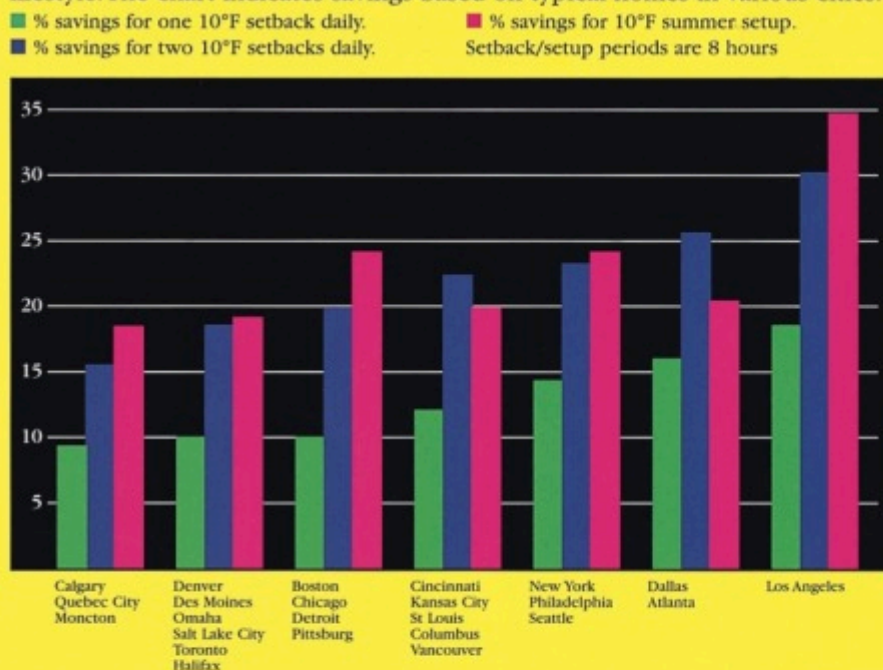

Preferential Rate Control

Enerstat® rate controls the heat/cool system during recovery to minimize overshoot and discomfort.

Typical Energy Savings for U.S. and Canadian Cities

% of savings will vary depending on: equipment, insulation and personal lifestyle. The chart indicates savings based on typical homes in various cities.

Enerstat® is committed to giving you cost-effective control of your environment. Our commanding lead in thermostat technology made enerstat® one of the first to give you programmable thermostats with solid state microcomputer technology. And now, enerstat® brings you cutting-edge temperature control electronics combined with the art of intelligent design.

enerstat®... energy efficiency never looked better!™
